

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

of *Hithe*; and to have gone round that Point to the other side, the distance must have been much greater. So that the Promontory spoken of by *Dion*, must needs be the *South-Foreland*, and *Cesar* must Anchor near over against *Dover*, from whence Sailing 8 Miles, he would double a Head-land and come to the *Downs*; which is such a Coast as he describes in one place by *apertum ac planum littus*, and in his 5th Book by *molle ac apertum littus*. As to *Dion's* word εἰς τὴν τελευτήν, what I have already said about it seems sufficient to prove that he means no more than the waters edge, and the *Etymologists* derive it from τεύχω *ma defacio*, because the wash and breach of the Sea does always keep it wet. And this word τὴν τελευτήν is used by *Polybius* for the Sea Ouse; and in another place he speaks of the difficulty of Landing at the mouth of a River διὰ τὴν τελευτήν πέρασθον, *ob limosum accessum*, so that it is not to be doubted that it ought to be rendred in this place, *ad vadum maris* rather than *in paludibus*. And so this objection against the assertion that *Cesar* Landed in the *Downs*, which is known to be a firm Champain Country without Fenns and Morasses, will be removed; and the whole Argument will 'tis hoped be admitted by the Curious.

A Receipt for the Curing of Castorium, according to the method us'd in Russia.

TAKE the Beaver Stones and get the Milk out of them as clear as you can, then set upon the Fire a Skillet or Kettle with water, big enough to contain the quantity of Stones you have to cure: let the water Boil, and put into it half a shovel full of clean Wood Ashes, then tie the Stones together in couples and put them into the water, and let them Boil therein for half a quarter of an Hour. Then take some Birch-Bark and lay it on

the Fire, and let the Stones be well smoaked over it for the space of an hour, until they are well dried in the smoak; then hang them up in a Kitchen or in the Air for a week or more, until they are perfectly dry and hard, after which they may be pack'd up in a Cask or otherwise for Transportation. If there be more Stones than will conveniently go into the Skillet or Kettle, you may make another boiling of them, and add a proportion of fresh Ashes and order them as before.

Observations on the making of Cochineal, according to a Relation had from an Old Spaniard at Jamaica, who had lived many years in that part of the West-Indies where great quantities of that rich Commodity are yearly made.

THE Insect whereof it is made he confirms to be the same which we call the Lady-Bird, *alias* Cow-Lady, which he says at first appears like a small blister or little knob upon the Leaves of the Shrub on which they breed, which afterwards by the heat of the Sun, become a live Insect as above, or small Grub. This Shrub is allowed by several Authors to be the same which we call the *Prickle-Pear*, or *Indian Fig*, having thick roundish Leaves that grow one out of another and full of sharp prickles. These Grubs in process of time becoming Flies like our Lady-Birds, as above, and being come to full Maturity, (which must be found out by experience in collecting them at several seasons) they Kill by making a great smother of some combustible matter, to Windward of the shrubs whereon the Insects are feeding, (having before spread some Cloaths all under the Plants) whereby all the Insects being Smother'd and Kill'd, by shaking the Plants will tumble down upon the Cloths. Thus they are gathered in great quantities
